	Skin Protection:	Hand Protection
		The glove material has to be impermeable and resistant to the product/ the
		substance/ the preparation. Due to missing tests no recommendation to the
		glove material can be given for the product/ the preparation/the chemical
		mixture. Selection of the glove material on consideration of the penetration
		times, rates of diffusion and the degradation.
		· Material of gloves
		The selection of the suitable gloves does not only depend on
		the material, but also on further marks of quality and varies from
		manufacturer to manufacturer. As the product is a preparation
		of several substances, the resistance of the glove material can
		not be calculated in advance and has therefore to be checked
		prior to the application.
